Supplementary Material

Leakage-Safe Cross-Domain Benchmarking for Bearing Fault Diagnosis: Time-Frequency Fusion, Calibration, and Self-Training

This supplement contains the five diagnostic figures referenced from the manuscript. Each figure is generated from retained result files in the accompanying repository; the supplement does not introduce a new model-selection experiment.

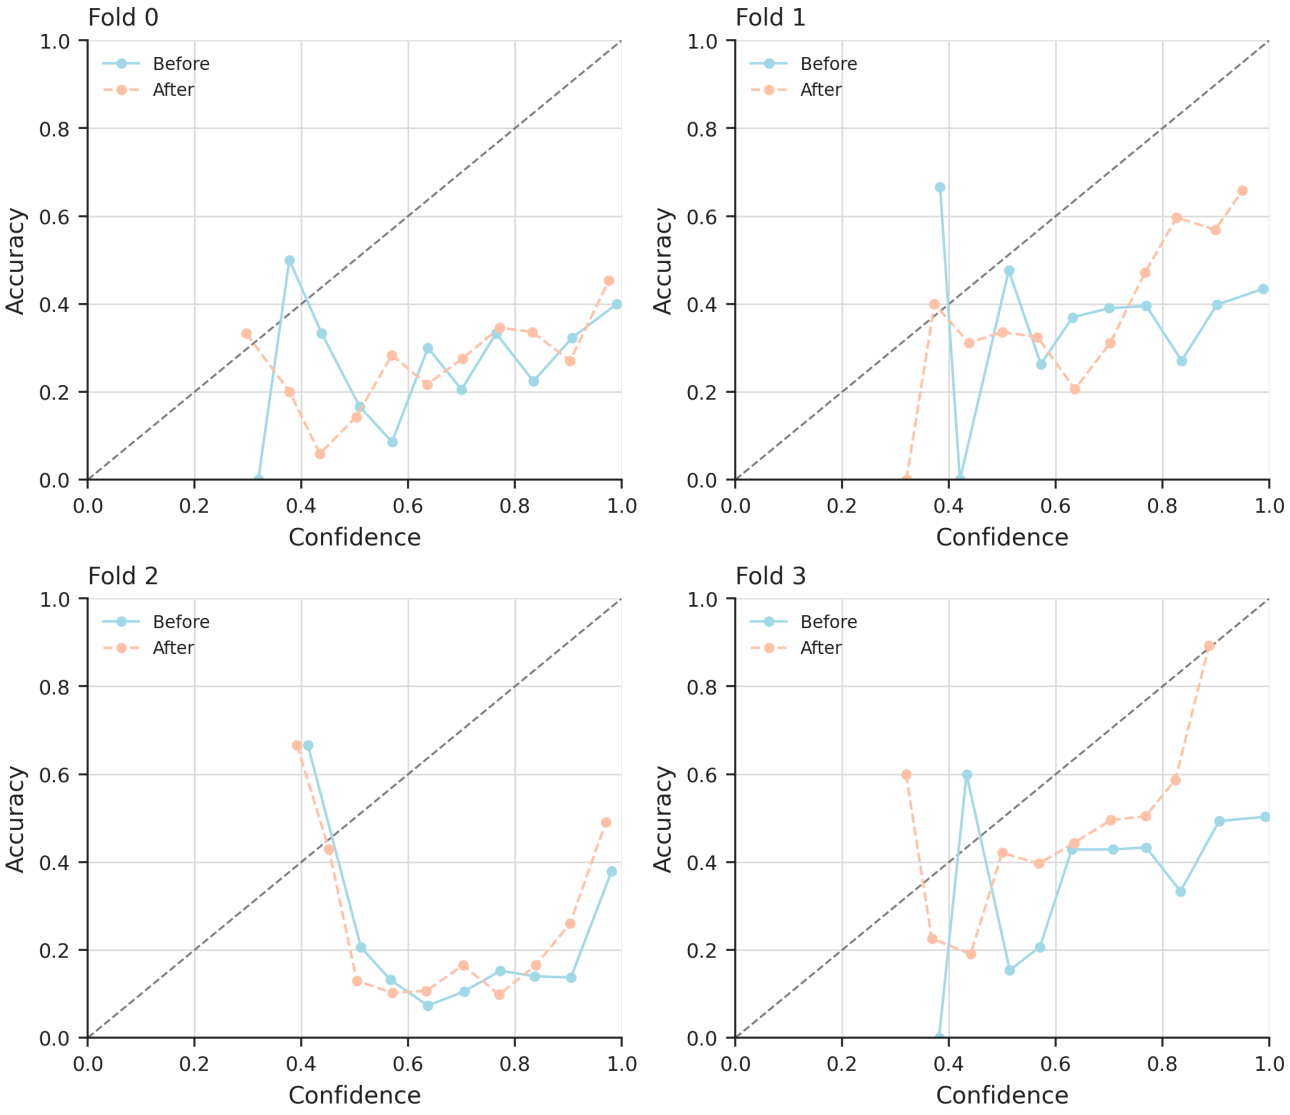

Figure S1. Per-fold reliability diagrams for CWT-GRU before and after validation-fitted temperature scaling.

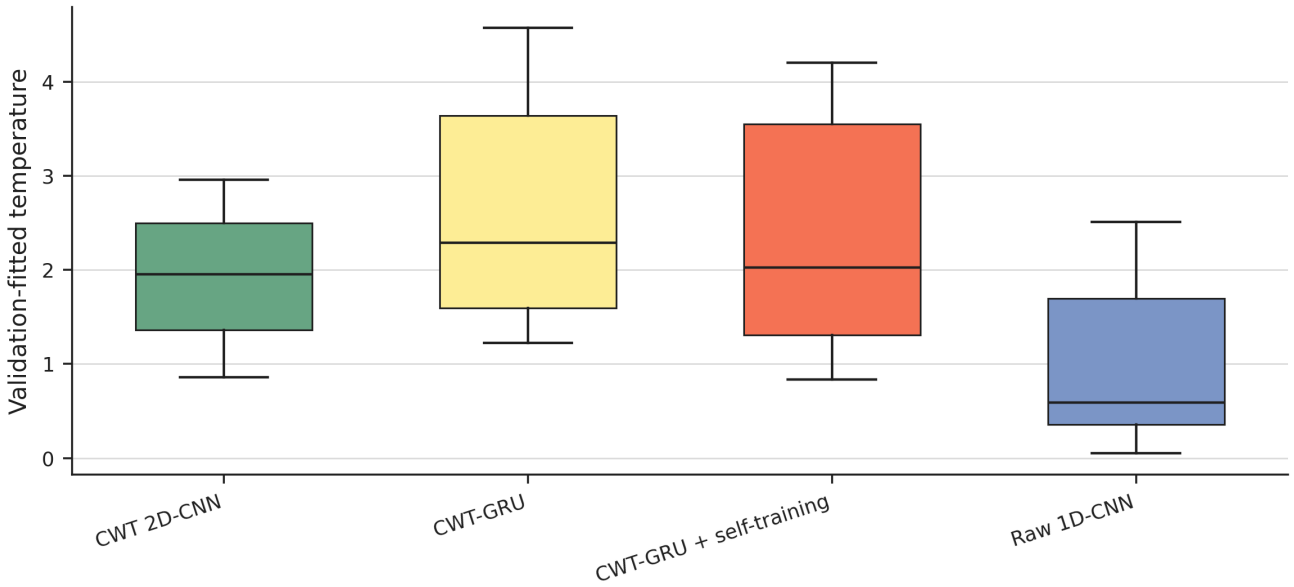

Figure S2. Distribution of validation-fitted temperatures for the principal retained models.

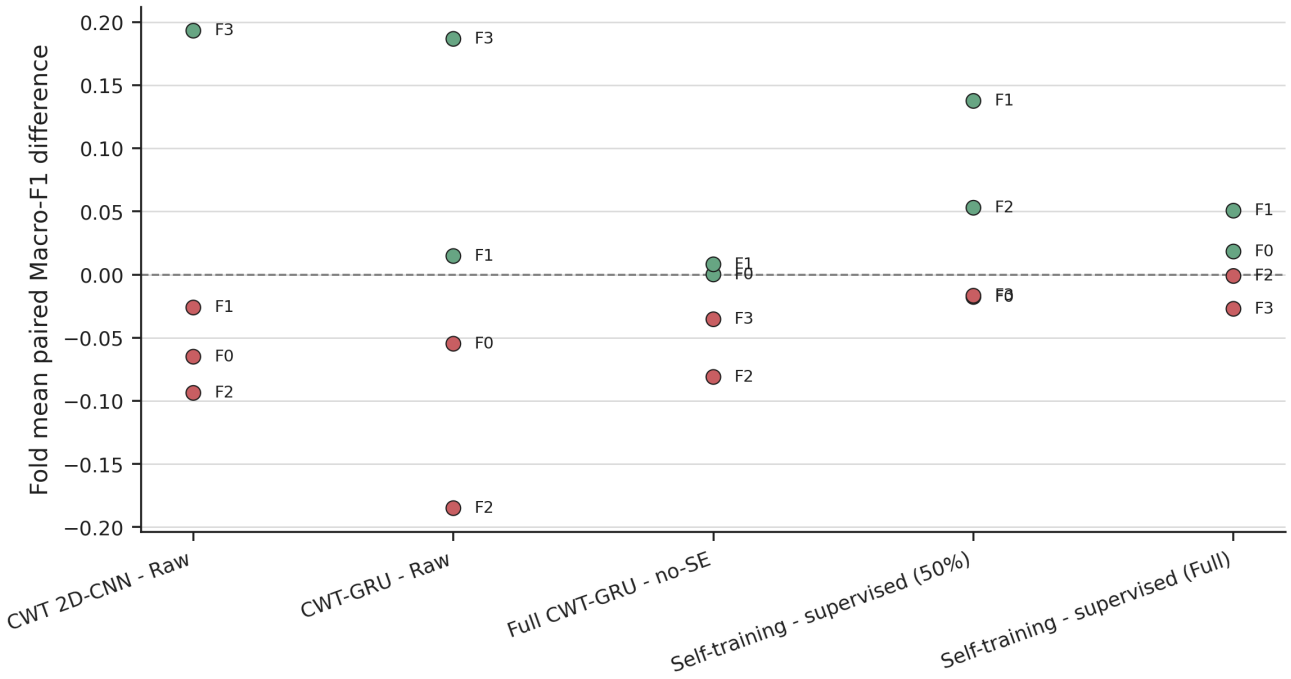

Figure S3. Fold-level paired Macro-F1 differences for the principal comparisons.

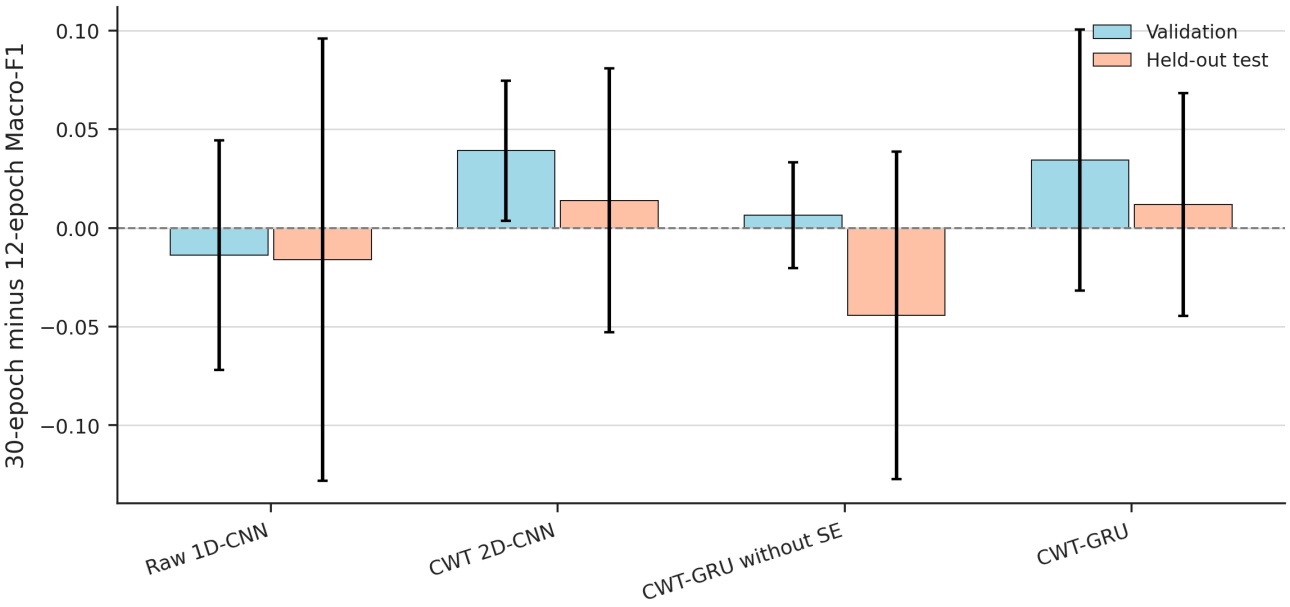

Figure S4. Validation and held-out-test effects of extending the training opportunity from 12 to 30 epochs.

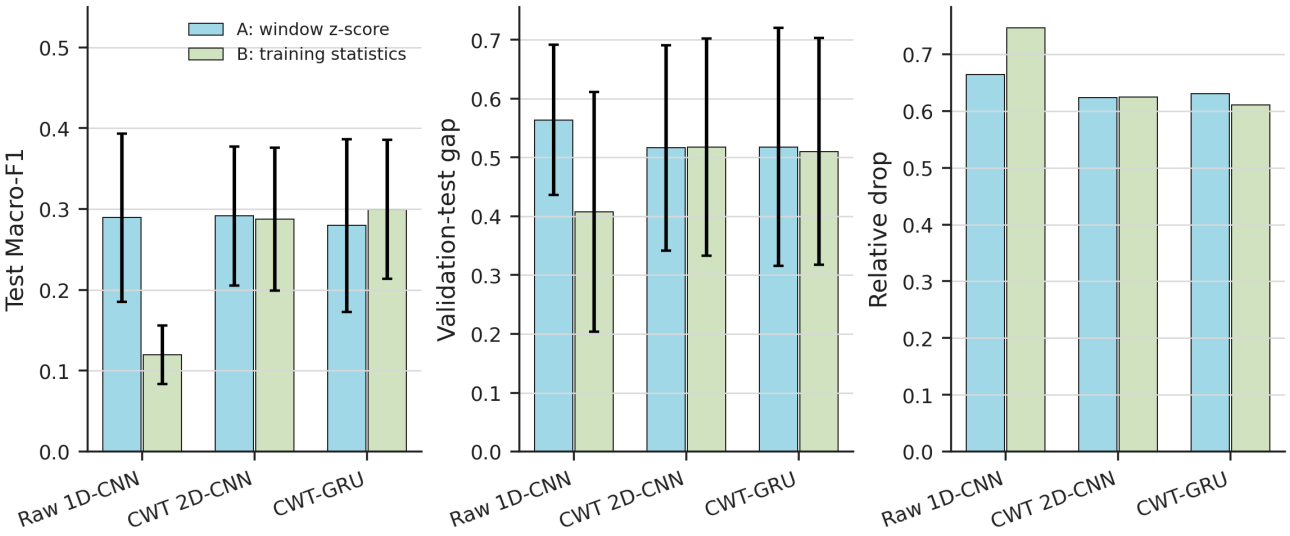

Figure S5. Window-wise and training-statistic normalization sensitivity.
